Re: Stealsafe Truck Immobilizer

To whom it may concern:

In October 2011 Sonic Transportation System participated in conducting real world tests using the Stealsafe Truck Immobilizer. The testing period was October 17 2011 thru to February 15 2012 utilizing a 2009 Freightliner FL120 Columbia and a variety of different trailers. During this period the unit performed as expected during the harshest climatic conditions of the year, which would include temperatures as low as -30C, snow storms, road salt and gravel, freezing rain etc. The majority of the testing was conducted on short highway hauls and city pickup and delivery services. During this testing period we experienced no down time as a result of the StealSafe System and each set of tests that were conducted showed that the trucks can be stopped in a safe and controlled manor.

Should you require any further information please don't hesitate to ask.

Sincerely

James Tensen

President

Sonic Transportation Systems
